## Stage #1 - Concept Design

The design process begins with an initial meeting on-site to discuss your project and assess the site. This is your opportunity to convey your vision and any ideas (ie.wish list) that you have including how you wish to use the space along with the style or look you desire. This will give us a good understanding of your requirements, personal tastes and budget. We will then discuss potential spatial layout, ideas for resolving any current site issues, suitable planting species and potential products & materials etc.

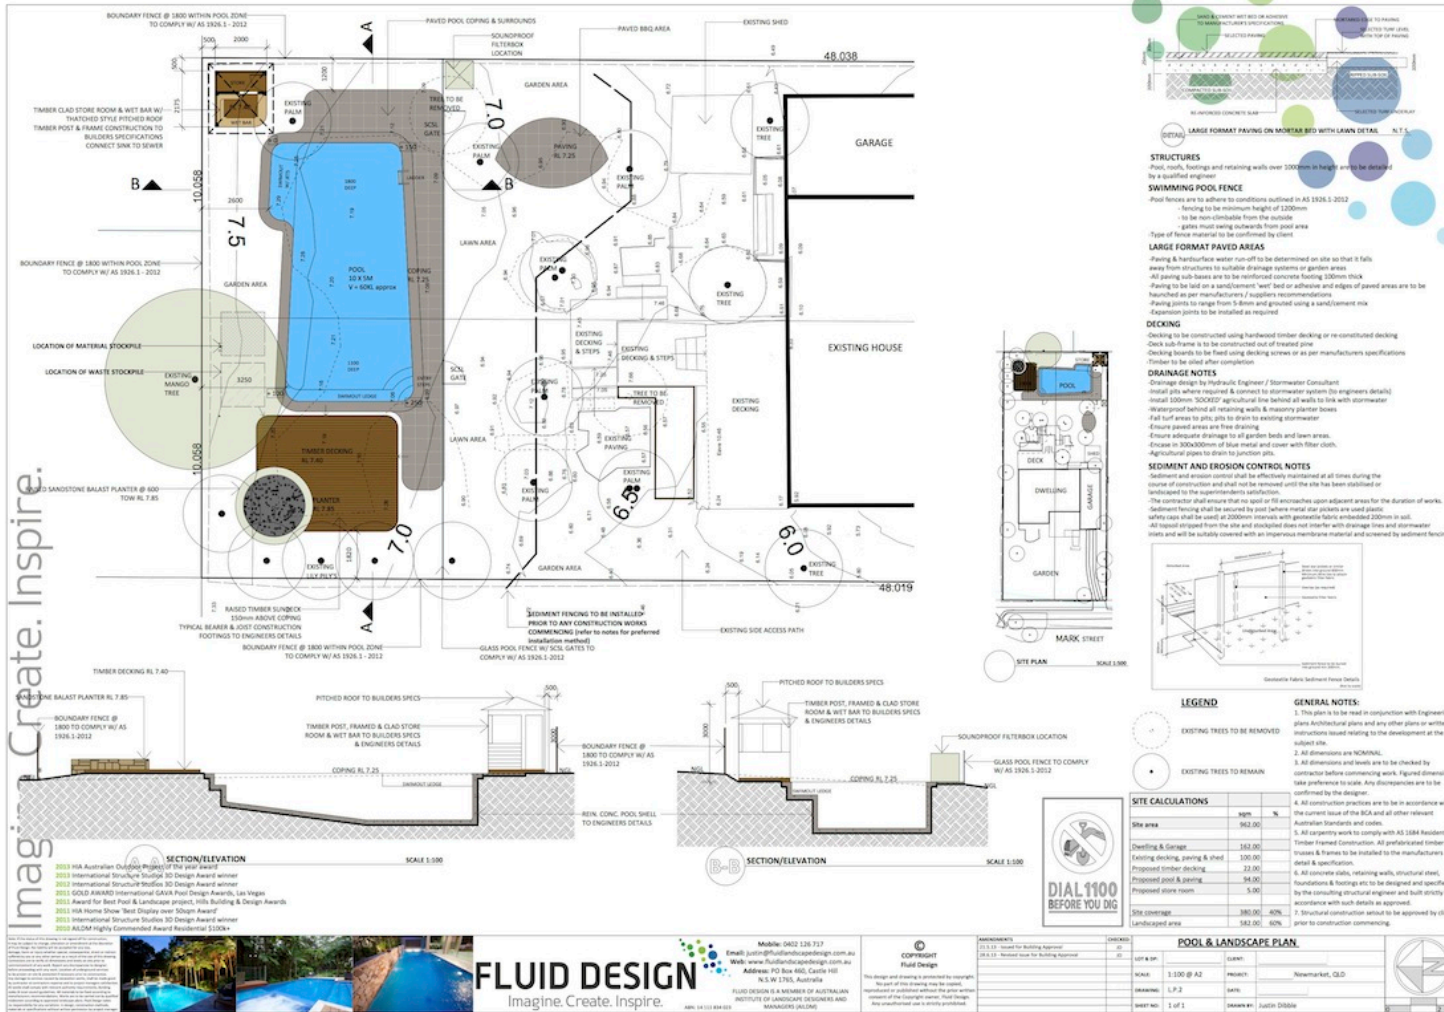

A Concept Design is prepared which is then presented to you showing the design layout of hard and soft areas like swimming pool, entertaining areas, paving, decking, lawn & gardens.

We also render our designs in 3D so you can see exactly how your new garden will look once completed. Planting theme, materials and finish suggestions will also be discussed as our recommendations suited to the style of your home & garden.

A preliminary cost estimate can then be prepared based on the proposed design.

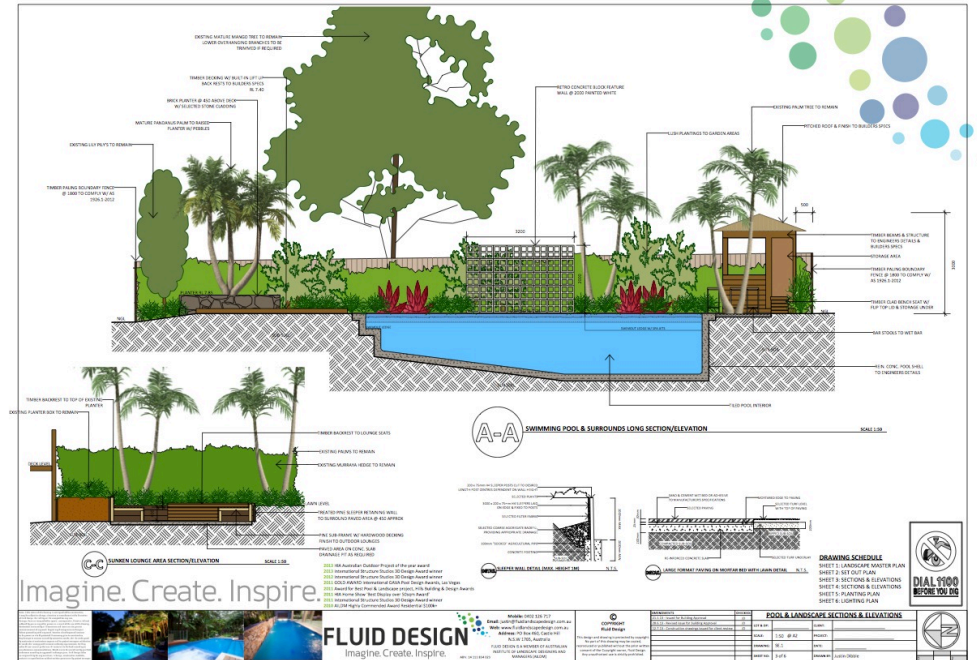

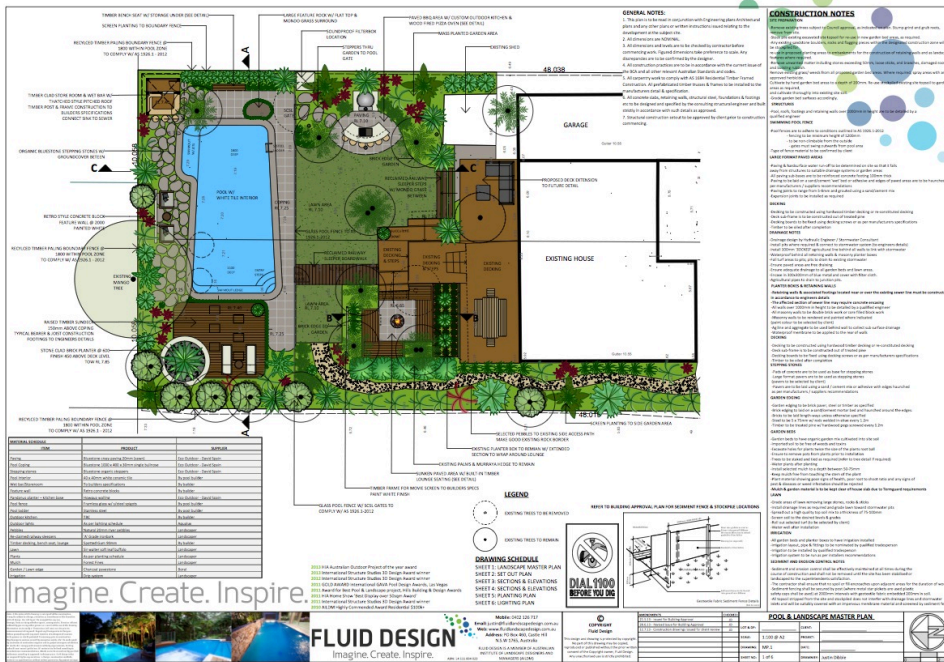

Stage #2 - Building Approval

Development Application (DA) or Complying Development (CDC)

Once you are happy with the concept design, DA or CDC drawings may be required to accompany the Architectural drawings for the building of new homes and/or for the building approval of structural landscape components such as swimming pools, outdoor rooms, retaining walls etc. Written reports may also be required to gain approval such as Environmental Impact Statements and Energy Efficiency etc. Structural Engineering drawings will also be required at this stage for any structures such as those mentioned above.

Stage #3 - Drawings for Construction

In order for your proposed Landscape works to be priced accurately and constructed in accordance to the design intent and vision of the project it is important to have a comprehensive set of detailed drawings completed. Detailed master plans, sections and elevations, construction details, planting plan, garden lighting plan and specifications are prepared. These drawings are the 'Blue prints' so to speak for the contractors to price and build from.

Shown on this page is an example of a residential backyard Landscape Master Plan, Hardscape setout plan and Sections & Elevations plan.

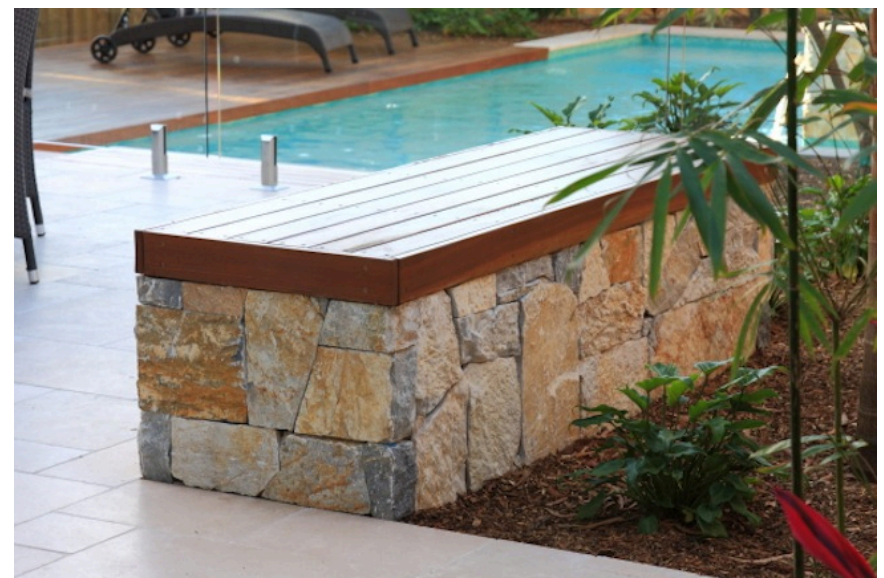

Project Administration is the final step and typically begins once the drawings are complete. This is where we represent you during construction with, for example, obtaining and analyzing quotes, selecting contractors, and then assisting those contractors with on-site layout or adjustments and ensure the project is built according to the plans.

Having designed your new garden with a clear vision in mind we will only obtain quotes from contractors with experience, good communication skills, high quality of workmanship and most importantly maintaining the integrity of the design. Once construction is underway we provide continual communication and site meetings throughout the construction process until completion with client and contractors which is crucial for a successful outcome.

As Designers we seek quality in the level of detail to finishes. We are also very particular about our plants and provide a price to supply the plants through our network of nurseries and suppliers. We work alongside the contractors when it comes time for planting spending time setting out all the specified plants ready for planting by the contractor.

When your new pool and/or garden is complete it is then time to sit back, relax and enjoy your own private oasis with family and friends.
